PROCESS

maps (each has index + class code)
 CLISTS (")
 subprocesses (")

crs cfl
 mra mfl
 spru spfl

can modify
 any object (map, clist, subprocess) (own process)
 name b, index
 confirm b, class code
 or within crs, cfl of (clist) (relative)
 mra, mfl of map (relative)
 of own subprocess

other processes
 read
 create

read

process
 object, index - (process index of self in own process)
 (or ~~current~~ current active subprocess?
 or current active subprocess?)

read

within crs, cfl (relative)
 mra, mfl (relative)
 of own subprocess
