# sensitive code versus interrupt routines

A) sensitive code will lock out all <sup>interrupts</sup> ~~sensitive code~~

B)

## algorithm

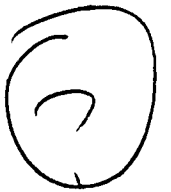

to do sensitive

set a flag

do sensitive code

unset flag

check to see if any are waiting, if so <sup>CEJ</sup> to him

interrupt routine will, when entered

check flag

a) set

put name on q

CEJ back (2 CEJS if no hardware chance)

b) wait

proceed

2 CEJ  
mode????
