

swapping

① completely private elcets! if a fit is locked - unlock it

? what is status when call for swapped ECS?

- must provide clean-up routine on
clearpa call - maybe

② segregate scratch of detail + attall

step 1 cripple all maps → use small stack - if stack exceeded -
restart -

step 2 for each open file

A) skip if frozen locally

B) skip if one level - DOS address of single attached block = FHR address + 6

C) lock - detach all blocks $\left\langle \begin{array}{l} \text{fix detail to save ABR chain} \\ \text{\textless not call SARSPA \textgreater} \end{array} \right\rangle$
 \leftarrow accumulate swapped released \rightarrow

unlock

step 3 call *daspa* to return (hopefully) all ~~attached~~ swapped CES

step 4 set out status in both subp

step 5 notify scheduler I am out & I ready
2) blocked

return or
wait
